Email: eliyaskhanmohammad36@gmail.com
Mobile: +91-7675843678

Skills

- **Languages**: C, C++, Embedded C, Python.
- **Frameworks**: Arduino Framework, MQTT, HTTP.
- **Backend**: Node.js, Firebase.
- **Tools**: Arduino IDE, Github, Thinkercad, Wokwi.
- **IoT Tools/Platforms**: ESP32, Raspberry Pi, Blynk, Arduino Cloud, Adafruit IO.
- **CS Fundamental's**: DSA, OOPS, DBMS, NETWORKS.
- **Soft Skills**: Team Player, Adaptability, Project Management, Team Collaboration.

Internship

IoT and Embedded System Intern | Innovative Technologies — Jun'2025 - Jul'2025

- Completed a 45-day internship focused on IoT and Embedded Systems development and deployment.
- Developed real-time IoT applications using Arduino, ESP32, and Raspberry Pi platforms.
- Implemented sensor and actuator integration with microcontrollers using Embedded C and Python.
- Applied communication protocols and edge computing principles in real-time monitoring systems.

Projects

Smart Crop Advisory System (AI-Based Agriculture Monitoring Platform) - GitHub — Mar'2025 - Apr'2025

- Developed an AI-powered system to predict rainfall and weather conditions and provide smart crop advises.
- Integrated weather data APIs to forecast upcoming weather for better farming decisions and productivity.
- Collected soil moisture, temperature, and humidity data using sensors from the device for real-time monitoring.
- Built a web platform suggesting suitable crops and irrigation based on predicted weather conditions.
- Implemented real-time data visualization to help farmers easily understand weather trends and crop guidance.
- Designed the system to support efficient water usage and improved agricultural productivity and sustainability.

  Tech Used: Embedded C, HTML, CSS, Blynk

Smart Waste Management System - GitHub — Jun'2025 - Jul'2025

- Developed a smart dustbin using ESP32, Ultrasonic sensor, MQ2 gas sensor, GSM, GPS.
- Implemented GPS-enabled dynamic routing to optimize waste collection efficiency.
- Reduced overall waste collection inefficiency by nearly 30% during prototype testing.
- Engineered cloud-based data logging to monitor bin status, analyze and improve collection scheduling.

  Tech Used: Embedded C, Python, Blynk

Raspberry Pi Environment Monitoring System - GitHub — Jun'2025 - Jul'2025

- Established a Raspberry Pi-based system to monitor temperature, humidity, air quality, and light levels.
- Built a real-time dashboard reducing manual monitoring effort by 40%.
- Set up automated alert notifications via email and SMS when sensor values crossed limits.
- Configured cloud data storage and historical trend analysis using Arduino Cloud/Google Firebase.

  Tech Used: Python, ThingSpeak

Certificates

- Certified Essentials | *Automation Anywhere — Certificate Link* — Nov'2025
- Oracle Cloud Infrastructure Certified AI Foundations Associate — *Certificate Link* — Aug'2025
- IoT and Embedded Systems Certificate | *Innovative Technologies — Certificate Link* — Jul'2025

Achievements

- **Leet Code -** Link — Feb'2025

  Earned 50 Days Coding Challenge badge on LeetCode for consistent problem-solving and algorithm practice.

Education

- **Lovely Professional University** — Phagwara, Punjab
  Bachelor of Technology - Computer Science and Engineering; ***CGPA: 7.21*** — *Since Aug'2023*

- **Sri Chaitanya** — Vijayawada, Andhra Pradesh
  Intermediate; ***Percentage: 83%*** — *Apr'2021 – Mar'2022*

- **Kommareddy High School** — Bantumilli, Andhra Pradesh
  Matriculation; ***Percentage: 98%*** — *Apr'2020 – Mar'2021*
